

## A PLACE TO WATCH THE MATCH

This iconic building at Lords Cricket Ground was the first all-aluminium semi-monocoque building, winning the RIBA Stirling Prize in 1999. The architects were Future Systems, who have a long history of great aluminium architecture. The building was put together in a West Country ship yard and was brought to London in five pieces by road. The structure was assembled on site, the aluminium pieces being welded together. The combination of the aluminium structure and the glass front show off both materials and provide a fantastic view of the ground for the media.
