

CONQUERING THE SKIES

The Airbus A380 Super Jumbo is the world's biggest ever passenger plane. Over 60% of it is aluminium. Lightweight, strong aluminium has been central to the worldwide development of the Aerospace industry.

The A380 wings are the largest ever manufactured for a civil airliner, made in North Wales then transported to Toulouse in France for assembly.

The wingspan measurement from tip-to-tip is 78.9 metres. The longest length of aluminium in a single wing is 46 metres. The aluminium sheet and plate for the wings is produced in Birmingham in the UK.
