

HELPING TO FARM THE FIELDS

The harsh environment of farming is a demanding place for machinery, open to the elements all year around. Efficiency and effectiveness rely on minimum weight and high durability in all mobile tractor and harvester units.

Increasingly designers have been turning to aluminium as the material of choice for mechanical equipment and attachments. The corrosion resistant, lightweight aluminium mechanisms offer low maintenance with rigidity. The extruded aluminium frame of spraying units and cast aluminium seed planting press wheels are among the many farming applications.
