

PARK LIFE

Parks and play areas are full of children and youths on push scooters, zooming around or performing freestyle stunts. Aluminium scooters are complex technical machines, originating from Switzerland in the 1990s. These pieces of street culture have evolved into high spec. High tech. Items of desire. Rigidity, Lightweight, and aesthetics are the key to performance and status on the park. Aluminium is the aspirational material of choice for all 'wannabe' tricksters.
