

PILL PACKAGING – SAFE & SECURE

Blister packs are commonly used as unit-dose packaging for pharmaceutical tablets, capsules or lozenges. The Blister packs provide long shelf life and tamper resistance.

Aluminium foil backing is referred to as “Lidding”, used in thicknesses of $7\mu\text{m}$ (0.007mm) to $30\mu\text{m}$ (0.030mm). The Aluminium Lidding has numerous properties which make it ideal for the safe, convenient and versatile packaging of many pharmaceutical products, such as tablets, powders and liquids. The unrivalled barrier properties of aluminium totally exclude the penetration of moisture, oxygen, aromas and other gases, as well as micro-organisms and light.

When it comes to recycling, advanced separation techniques mean that the aluminium foil can be recovered and recycled at a fraction of the original energy cost.
