

## **PROTECTING THE TITANIC (and keeping it looking good)**

One hundred years after the birth of the world's most famous ship, a museum dedicated to the ship has become a major new tourist attraction for Northern Ireland.

The unique architectural design was influenced by features of ice crystals, ships' hulls, and the insignia of the shipping line.

The external forms and profiles of this iconic building are defined by 3,000 anodised aluminium facia panels. The specification called for a lifetime guarantee not subject to cleaning. The proximity to the sea means that the panels will be exposed to salt air and strong winds. The Aluminium panels come with a 'Marine guarantee', proven to stay looking great in one of the most hostile weather environments.
